Take horizon scanning to the next level

Save your legal, risk, and compliance teams hours of manual effort

Horizon scanning is a critical first step in handling the volume and velocity of regulatory change. However, most scanning tools simply search for new or updated regulatory information. You still have to manually pore through voluminous amounts of regulatory content to determine if the information is relevant to your business. That is an expensive, time-consuming, and error-prone process.

AscentHorizon delivers a streamlined, consolidated view of all regulatory content that impacts your business, including news, guidance, enforcement actions, rules, and amendments.

Worldwide coverage
powers informed decision-making on a global scale

Continuous monitoring
of global regulatory sources

Automated alerts
on relevant regulatory updates and rule changes

Powerful filters
deliver information tailored to specific needs and interests, eliminating irrelevant content

Granular search
within documents enables users to find key details quickly
